Innovate. Integrate. Automate.

HyerTek empowers government organizations to modernize legacy technical operations, using Microsoft technologies. We leverage cloud-native technologies, agile methodologies, and advanced analytics to deliver cutting-edge solutions, focusing on information management and digital transformation. Our goal is to rapidly deliver innovative, integrated, and automated solutions that enable the government and its citizens to achieve their missions with *efficiency and precision*.

Capabilities

Information Management
Address federal government challenges related to records, data, and knowledge management with integrated case and enterprise content management solutions using SharePoint, Teams, Dynamics 365, and the Power Platform. Streamline workflows, enhance collaboration, and centralize knowledge with secure SharePoint storage, Dynamics 365 case tracking, and Power Platform automation. Ensure compliant and efficient data handling with easy access to information, empowering agencies to manage records and knowledge efficiently, improve decision-making, and enhance transparency.

Advanced Analytics
Implement an enterprise data management and governance strategy using Microsoft platforms such as Power BI and Microsoft Fabric. Create integrated data platforms for unified processing, visualization, reporting, and analytics. Deploy data pipelines for migration and transformation. Enhance operations with machine learning and artificial intelligence for business process and workflow automation. Ensure robust data governance and compliance across the data lifecycle.

Application Modernization
Modernize legacy client-server, database-driven, and web applications by migrating to the Microsoft Power Platform using low-code/no-code capabilities and Generative AI, powered by Copilot. Refactor with Dataverse, Power Automate, and Power Apps for scalability and efficiency. Utilize Agile, Application Lifecycle Management (ALM), and a Power Platform Center of Excellence (CoE) for governance and rapid deployment. Integrate DevSecOps, focusing on UI/UX and security, to build scalable, modern applications with long-term sustainment.

Cloud & DevSecOps
Design and modernize secure Azure cloud environments, focusing on seamless migration of legacy IT systems. Leverage automation to enhance security, governance, and operational efficiency. Strengthen cloud operations with robust governance frameworks and integrated security. Facilitate DevSecOps with automated, secure CI/CD pipelines and policy-driven workflows. Provide comprehensive Azure hosting, security, and operational support.
